

The background image shows a university courtyard. In the foreground, a large, ornate stone archway frames the view. A young woman with long dark hair, wearing a black jacket and blue jeans, is walking across the courtyard floor, which has a blue and white checkered pattern. In the background, through the archway, a large, colorful building with a central dome and many windows is visible. The sky is blue with some clouds. The image is framed by large red diagonal shapes on the left and right sides.

WEEK 1

WELCOME TO SECTION!!!

Section Leader
Eesha Tariq

The background is a solid pink color. It is decorated with various hand-drawn doodles in black and white. In the top left, there are two parallel black lines, a dashed black line, a solid black line, a black plus sign, and a white zigzag line. In the top right, there is a white zigzag line, a dashed black line, a white triangle, a black plus sign, and a black 'C' shape. In the bottom left, there is a white brushstroke. In the bottom center, there is a black plus sign and a black squiggly line. In the bottom right, there is a white semi-circle with vertical lines inside.

Introductions

A Little About Me

- ★ My name is Esha Tariq. I'll be your Section Leader for Code in Place, and everyone here majoring/will be your section-mates!
- ★ I am working in Software Engineering.
- ★ I am Top 20th Github Contributor
- ★ I enjoy coding in python.

What About You All?

Go ahead and share:

1. **Your name**
2. **Where you're tuning in from**
3. **One thing you're looking forward to (it doesn't have to be from Code in Place)!**

If you aren't warmed up and comfortable with speaking just yet, that's fine! You can share directly to everyone in the chat or you can message me and I can read out your introduction for you!

Another question: what can I do to make you feel included? Please feel free to private message me in the chat if there's anything I can do to make you more comfortable.

Breaking the Ice

In breakout rooms:

- Share your names one more time!!!
- Icebreaker Question: What's your dream project?
- If no one wants to share first, the person who is geographically closest to Stanford shares first!

Lecture Review

What We've Learned

Before we get into our sample problem for today, let's review a bit. We've learned:

- The basics about Karel, the magnificent and wonderful robot
- Functions, a way of breaking down big problems into smaller chunks
- Control Flow, loops and conditional statements which guide our programs

This is a **LOT** of content, especially if you are newer to CS!

make_dough()

shape_pasta()

cook_pasta()

For Loops

```
def main():  
    # repeats the body 99 times  
    for i in range(99):  
        # the "body"  
        put_beeper()
```

The background is a solid orange color. It is decorated with various white and black geometric shapes and lines. In the top left, there is a dashed line and a small white triangle. In the top center, there is a dashed line and a white triangle. In the top right, there is a dashed line, a black zigzag line, a small white circle, and two parallel black lines. In the middle left, there is a white triangle. In the middle right, there is a white triangle and a large black arc. In the bottom left, there is a black plus sign. In the bottom center, there is a black circle and a white triangle. In the bottom right, there is a black arc and a large white circle.

**Let's review and
refresh these
concepts a bit!**

Karel Overview

Hello, my name is Karel! Nice to meet you.

- Karel is a small, but mighty robot!!!
- It has a few basic commands including: **move()**, **turn_left()**, **pick_beeper()**, and **put_beeper()**
- On its own, Karel has limited functionality, but with the help of our code, we can make great things happen!

Functions Overview

When you think of functions, recall Chris and Mehran's analogy to **making pasta**. Each function has a specific purpose which breaks down a larger problem into smaller chunks—just like steps in making pasta from scratch!

To make a function, you need to define it using the `def` keyword. Afterwards, write the code you want the function to run. Make sure the code is indented below the function name like so:

```
def function_name():  
    # Function code goes here!!!
```

`make_dough()`

`shape_pasta()`

`cook_pasta()`

WHICH CONTROL FLOW SHOULD BE USED?

1. Move Until Wall:
2. Obstacle Check:
3. Jump Over a Hurdle:
4. Place 5 Beepers:

Control Flow Overview

For-loop (definite loop):

- Performs some block of code, a specific amount of times.

While-loop (indefinite loop):

- Continuously perform a block of code until what's being tested is evaluated to false.

If-statement:

- Tests for truth. Performs a block of code only when evaluated to true.

For-Loop

An example for-loop that you may see and use with Karel:

```
def turn_right():  
    for i in range(3):  
        turn_left()
```

This loop is also called a *definite loop* because we know where it ends, when *i* reaches 3. (Be careful to remember that *i* begins at 0 when we start our loop!!!)

While-Loop

An example while-loop that you may see and use with Karel:

```
def move_to_wall():  
    while front_is_clear():  
        move()
```

This loop is also called an *indefinite loop* because it will run until the associated condition becomes false, which may be never! Who knows? You will, hopefully. Be careful so you don't get stuck in an infinite loop while using this!

If-Statement

An example if-statement that you may see and use with Karel:

```
def safe_move():  
    if front_is_clear():  
        move()
```

An if-statement runs code inside of it when the associated statement is evaluated to true. We will get into more complex statements later on in the course to add much more flexibility to our if-statements!

The background is a solid orange color. It is decorated with various hand-drawn geometric shapes in white and black. These include a dashed line in the top left, a white triangle in the top center, a black zigzag line in the top right, a white circle in the top right, two parallel black lines in the top right, a white triangle in the top right, a black plus sign in the bottom left, a white circle in the bottom center, a white triangle in the bottom center, a black plus sign in the bottom center, a black circle in the bottom center, and a white circle in the bottom right.

Any Questions?

**HAVE YOU EVER WONDERED IF YOU COULD BUILD A
HOSPITAL IN KAREL WHERE THE ROBOT ACTS LIKE A
NURSE?**

Hospital

**Hospital
Karel**

Section Problem: Hospital Karel

Each beeper in the figure represents a pile of supplies.

The background is a solid orange color. It is decorated with various hand-drawn geometric shapes and lines in white and black. These include a dashed line in the top left, a white triangle in the top center, a black zigzag line in the top right, a white circle in the top right, two parallel black lines in the top right, a white triangle in the top right, a black plus sign in the bottom left, a white circle in the bottom center, a white triangle in the bottom center, a black plus sign in the bottom center, a black circle in the bottom center, and a white circle in the bottom right.

Context

Countries around the world are dispatching hospital-building robots to make sure anyone who gets sick can be treated. They have decided to enlist Karel robots. Your job is to program those robots.

Karel's job is to walk along the row and build a new hospital in the places marked by each beeper.

Karel's job is to walk along the row and build a new hospital in the places marked by each beeper.

Hospitals look like this: a 3x2 rectangle of beepers!

The new hospital should have their corner at the point at which the pile of supplies was left.

At the end of the run, Karel should be at the end of the row having created a set of hospitals. For the initial conditions shown, the result would look like this:

Notes to Keep in Mind

- Karel starts facing east at (1, 1) with an infinite number of beepers in its beeper bag.
- The beepers indicating the positions at which hospitals should be built will be spaced so that there is room to build the hospitals without overlapping or hitting walls.
- There will be no supplies left on the last column.
- Karel should not run into a wall if it builds a hospital that extends into that final corner.

The background is a solid orange color. It is decorated with various hand-drawn geometric shapes in white and black. These include a dashed line in the top left, a white triangle in the top center, a black zigzag line in the top right, a white circle in the top right, two parallel black lines in the top right, a white triangle in the top right, a black plus sign in the bottom left, a white circle in the bottom center, a white triangle in the bottom center, a black plus sign in the bottom center, a black circle in the bottom center, and a white circle in the bottom right.

Questions Before We Begin?

The background is a solid pink color. It is decorated with various hand-drawn geometric shapes and lines in white and black. In the top left, there is a dashed black line and a solid white triangle. In the top center, there is a dashed black line, a solid white triangle, and a solid black zigzag line. In the top right, there is a solid black zigzag line, a solid black double line, and a solid white circle. In the middle right, there is a solid white circle. In the bottom left, there is a solid black plus sign. In the bottom center, there is a solid black circle and a solid white triangle. In the bottom right, there is a solid black circle and a solid white circle.

Let's get to work!

THANK YOU

See you in next session 😊
